1. Introduction

CONFIDENTIAL

1.1 Company profile

Van Bakel Eco B.V., Van Bakel Elektro Roosendaal B.V., Van Bakel Services B.V. and VBE Projecten B.V. (from here on, referred to as “Van Bakel”) is an electrical engineering specialist providing integrated services for both residential and commercial clients. Their work spans the full process, from design and installation to inspection and maintenance, with key expertise in client-specific electrical systems, security solutions, solar energy, energy storage solutions and electrical management systems.

1.2 Motives seller

The seller is looking for a strategic partner who can continue the upward trend of the company and strengthen the continuity of the company.

1.3 Transaction object

In the proposed transaction, 100% of the shares of Van Bakel are offered for acquisition. The current legal structure of Van Bakel is shown schematically.

1.4 Proposed transaction date

The proposed effective date is 01-01-2026.

1. Introduction

CONFIDENTIAL

- Leading electrical engineering specialist delivering integrated services
- Innovative in the field of sustainability
- Strong customer relationships built on long-standing partnerships
- Sufficient capacity to keep growing in the coming years

- Sales: € 7,5mIn (2024)
- Normalized EBITDA: € 2,3mIn (2024)

- Active in both the residential and commercial markets, with a primary focus on the commercial segment
- Strategically located in the south of the Netherlands, operating from two locations

- 27 FTE in 2024
- Young and highly motivated staff with wide experience

History Van Bakel

'93

FOUNDATION

Van Bakel was founded by Anthony van Bakel in Heesch, with a focus on electrical installations and in 1995 the first technician employee is employed.

'05

EXPANSION

Van Bakel opened a second location in Roosendaal, expanding its presence in the western part of North Brabant. In 2006, Van Bakel Services was created to structure maintenance, service contracts, and relationships.

'10

SUSTAINABILITY

As one of the first installation companies, Van Bakel established an eco division dedicated to sustainability. In 2017 they established the Bernheze Energy Cooperative ("BECO") with other parties.

'25

GROWTH

Over the past 32 years, Van Bakel has grown from a small player into a key player in the industry to be the all-round partner in electrical engineering.

2. Company information

CONFIDENTIAL

2.1 Legal structure

On the right side, the legal structure is displayed. Below, the various entities are explained.

- Stichting Administratiekantoor van Bakel Heesch is the entity of Anthony van Bakel, who holds 100% of the certificates. The board consists of Anthony and his partner, Manon Geurts. Anthony is authorized to act independently as director.
- Karli B.V. is the holding company. Anthony and Manon are included on the payroll of this entity. Several years ago, this entity operated as a sales company. As a result, certain expenses are still recorded at Karli, which are subsequently recharged to the four subsidiaries.
- Van Bakel Eco B.V. is an operating entity focused on sustainability solutions, including solar panels, charging infrastructure, and energy storage. The entity was founded in 2023. Prior to the establishment of this entity, these activities were performed in Van Bakel Services B.V.
- Van Bakel Elektro Roosendaal B.V. is an operating entity focused on electrical engineering.
- Van Bakel Services B.V. is an operating entity established to structure maintenance, service contracts and partner relationships. This entity focuses mainly on smaller-scale projects, but with high-quality content and technical complexity.
- VBE Projecten B.V. is an operating entity where the larger projects are housed, handling electrical work and preferably combined with solar panels, charging infrastructure, security, and energy storage.

2. Company information

CONFIDENTIAL

2.2 Operational activities

Van Bakel is an installation company for electrical installations with extensive experience serving both residential and commercial clients, primarily in the southern region of the Netherlands. The operational activities of Van Bakel are categorized into three groups and are further explained below:

i). Electrical

Van Bakel specializes in electrical installations for new construction, renovation, and utility projects. It offers services from design to maintenance with a focus on quality and future-proof solutions. The electrical services are divided into three subsections:

Power & Light

Each project begins with a design tailored to customer needs and safety standards. Power installations consider consumption, users, and required capacity, including the integration of technologies such as electric vehicles and solar panels. Lighting designs are based on their intended purpose, whether for ambiance, functionality, or safety, and use sustainable LED technology.

Domotics

Besides that, Van Bakel installs and integrates smart systems that connect various technologies, allowing centralized control of lighting, access, and alarms, thereby increasing comfort and operational efficiency.

Inspection & Maintenance

Furthermore, the company carries out independent inspections in accordance with NEN 3140 standards and SCIOS Scope 8,10 and 12, including thermal imaging to detect heat development and fire risks. Components such as switchgear, distribution boards, connection points, and wiring are all assessed. Clients receive a clear report with findings and recommendations, followed by a tailored maintenance plan.

2. Company information

CONFIDENTIAL

ii). Security

Van Bakel provides integrated security systems designed to meet regulatory requirements and enhance safety across various property types. The security services are divided into three subsections:

Burglary protection

The company initiates burglary protection by determining the required security class based on insurance standards, then proposes organizational, structural, and electronic measures. Early detection and a reliable alarm system are central to their approach.

Fire safety

Van Bakel provides comprehensive fire safety services, ensuring the installation of smoke detectors on every floor and assessing the need for additional fire alarms, evacuation systems, or heat detection systems based on the building's type and usage. For companies and organizations, as a BORG-certified company, they prepare a program of requirements that is assessed by the fire department.

Camera safety

Their camera systems provide reliable remote surveillance, offering clear oversight even when no one is on-site. Beyond integration with burglary protection systems, they can also be deployed for operational monitoring, helping to streamline processes and improve efficiency.

Data

Their data solutions ensure the robust infrastructure needed for high-quality video surveillance. Modern networks support seamless transmission of video, data, and voice, including VoIP telephony and dedicated data lines, providing a solid foundation for a secure and accessible information flow.

2. Company information

CONFIDENTIAL

iii). Eco

Van Bakel provides sustainable energy solutions focused on quality and efficiency.

Solar panels

The company delivers complete solar panel installations, including energy and structural calculations, and offers support with subsidy applications (only for commercial clients). They exclusively use Tier 1 solar panels, known for their high quality and highest efficiency.

Charging solutions

Van Bakel also offers charging solutions through ConnectNed, ranging from individual charging points to complete charging plazas. These systems feature smart charging and load balancing to align green energy supply with charging demand and prevent overload of the main electrical connection.

Storage systems

To optimize the use of generated solar energy, Van Bakel recommends battery storage systems that store excess energy for later use, maximizing the efficiency of the installation.

2. Company information

CONFIDENTIAL

2.3 Distinctiveness

One stop shop

The company differentiates itself through an integrated service offering that combines expertise in electrical engineering, security systems and sustainable technologies. This enables Van Bakel to position itself as a comprehensive one stop shop for its clients.

Regional reputation

Van Bakel has a strong regional presence in North Brabant / the south of the Netherlands, supported by many years of industry experience.

Price - quality ratio

Clients primarily choose Van Bakel for its excellent price-quality ratio and dedicated points of contact.

Professional memberships

Van Bakel has memberships in respected industry associations such as Techniek Nederland and ElektroNed strengthens the company's ability to serve national clients.

Innovation

Innovation is a key element of the company's identity, particularly through Van Bakel Eco, which drives the sustainability agenda and supports an integrated approach to project delivery.

Internal structure

Van Bakel has a strong internal structure, with many young employees complemented by experienced professionals.

2. Company information

CONFIDENTIAL

2.4 Location

Van Bakel is located at Cereslaan 16, in Heesch and Schotsbossenstraat 10A, in Roosendaal, both in the Netherlands. Both properties are leased.

- The company leases the building at Cereslaan 16 in Heesch from Anthony van Bakel. The building is used as office and commercial space. The agreement commenced on July 1st, 2011, with a duration of five years, until June 30th, 2016. Subsequently, the agreement is renewed every five years. Most of the rental expenses are recorded in Karli B.V. (2024: € 120K), whose facilities are utilized by all four operating companies. These costs are allocated to the different entities based on revenue distribution. In addition, a portion of the rental expenses is recorded in Van Bakel Eco B.V. (2024: € 43K), specifically for the Eco warehouse. The property valuation report for Cereslaan 16 in Heesch states a market rental value of € 115K.
- Van Bakel Elektro leases the building at Schotsbossenstraat 10A in Roosendaal from Nederburg Beleggingen. The building is used for warehousing and office purposes. The current period is up and until January 1st, 2027. The yearly rent is € 22K.

2. Company information

CONFIDENTIAL

2.5 Revenue

The revenue and gross margin (%) development for 2023 – 2025 are displayed in the graph on the right. For 2025, actual revenue represents the first half of the year, while forecasted revenue covers the second half.

The year 2023 was highly successful for the company, driven in part by the strong growth in solar panel sales. However, in 2024 Van Bakel experienced a temporary decline in revenue due to new government regulations, primarily the announcement of the complete elimination of the net metering scheme in 2027, which particularly caused a significant downturn in the residential solar market.

Measures have been taken to restore growth, with contracts continuing to be secured mainly from corporate clients and housing associations. All new residential construction projects now include rooftop PV installations, replacing the previous EPC standard in line with updated energy requirements. As several projects have been postponed to 2025, the first half of the year does not accurately reflect the second half. Consequently, revenue in the latter half of 2025 is expected to exceed that of the first half.

The company manages its business primarily based on margin and therefore selectively pursues only the most attractive and profitable projects. In periods when such projects are temporarily unavailable, the company undertakes slightly less work to preserve consistent pricing expectations and to ensure sufficient capacity for high-value opportunities when they arise.

2. Company information

CONFIDENTIAL

The annual revenue split between residential construction and commercial construction is roughly 50/50, with residential construction consistently accounting for a slightly larger share than commercial construction.

The revenue distribution graph on the right shows the revenue distribution in percentages by revenue category. There may be some overlap between the revenue streams, but the proportions are consistent. Below, the different categories are explained:

- Revenues from burglar alarms, fire alarms, and CCTV relate to security services. This segment showed a slight decline as a percentage of total revenue, primarily because, from 2024 onwards, a small portion of these revenues will be classified under electrical installation revenue.
- Revenue from electrical installations relates to general electrical works. It also includes other revenue groups, as these often involve combined projects. The relative growth is primarily driven by organic growth and, from 2024 onwards, a shift in focus from PV installations to electrical projects.
- Revenue from PV installations and charging stations relates to solar systems, charging solutions and storage systems. Since 2024, the share of total revenue from this segment has declined significantly, primarily due to the government decisions regarding solar systems.
- Revenue from domotics, telecom, and data, which primarily serves residential customers, has declined. The company has made this strategic choice deliberately, as this work requires significant attention while providing limited added value. It was decided to allocate these hours more effectively by focusing on commercial clients.

- Previously, monitoring subscriptions were arranged directly between the control room and the end customer. For new customers, Van Bakel concludes the contract directly with the end customer and receive an invoice from the control room. As a result, there was no revenue recognized before, whereas from 2023 onwards there is. Since the revenue is still limited, it is not reflected as a percentage in the table.

Revenue distribution (%) 2023 - 2025YTD

2. Company information

CONFIDENTIAL

2.6 Customers

Van Bakel serves both residential and commercial clients. It maintains long-standing partnerships with major established companies, various local project developers, and SME businesses. The company also provides long-term maintenance services to a range of corporate clients and investors.

Below, the top ten clients are displayed. This shows that some clients consistently return to the top 10 annually. The top 5 clients accounted for 26%, 41% and 35% of the total revenue in 2023, 2024 and 2025YTD (June 30, 2025), respectively. Remark: if a client does not appear in the top 10, the entire revenue achieved by this particular client is not included in the table.

The commercial clients of Van Bakel are active in several industries, such as construction, real estate, project development and electrical engineering. The company's business solutions are tailored to meet the unique needs of clients, regardless of their industries.

The majority of Van Bakel's total revenue is derived from commercial clients. This varies annually but accounts for at least 75% of total revenue. The residential clients are mostly individuals with an existing relationship with Van Bakel, for example the director-major shareholder (DGA) of a commercial client or a technical manager employed by a commercial client. In 2023, the percentage of residential clients was higher due to more residential PV installations.

2.7 Suppliers

Van Bakel maintains long-term relationships with a carefully selected group of suppliers, supporting both general and project-specific needs. Van Bakel intentionally limits the number of suppliers it collaborates with to strengthen strategic partnerships and avoid fragmented, low-impact purchasing practices. The company primarily purchases general materials from wholesalers and specific products from specialized suppliers.

Below the top 10 suppliers (for cost of goods sold and outsourced work) are displayed. The main supplier accounts on average for 26,6% of total cost of goods sold. The 2025 year-to-date figures are reported up to and including June 30, 2025.

Cost of goods sold per supplier Van Bakel (x € 1)		Rank			Cost of goods sold			% Cost of goods sold

2. Company information

CONFIDENTIAL

2.8 Software

Van Bakel uses the following software packages for various functions:

- **Accounting:** Syntess.
- **Planning / ERP:** Syntess and Van Bakel Elektro's proprietary business app, an app for employees for, among other things, downloading technical documents, accessing news updates, ordering clothes and submitting leave requests.
- **Project Management:** Excel, Trimble (construction and electrical software), AutoCAD and Stabicad.
- **HR / Payroll Administration:** Afas, managed through a payroll agency.

2.9 Certification

Van Bakel holds various certifications and memberships that demonstrate its commitment to quality, safety, and industry collaboration:

- BRL6000 A/B.
- VCA*.
- Borg-E.
- Scope 8 and Scope 10 inspections, Scope 12 inspections performed through an external partner.
- Membership of Techniek Nederland and ElektroNed, and participant in ConnectNed (charging infrastructure back office).
- Own company training school, DUO Elektro, dedicated to educating young people and career switchers.

2. Company information

CONFIDENTIAL

2.10 Organizational structure

The organizational structure of Van Bakel is shown below. There is considerable overlap between the roles in different entities, allowing Van Bakel to operate as a single, integrated organization. The staff functions (on the right) oversee and support the whole organization.

The management team ("MT") currently consists of the director, Anthony van Bakel, an operations manager, and a representative from HR (administrative staff).

The current director Anthony van Bakel indicates a willingness to remain involved for a certain period if desired and, in any case, wishes to continue serving as an ambassador of the company. Anthony is mainly responsible for general tasks and maintaining commercial customer contact.

The company has two operations managers. One (Roosendaal branch) has been with Van Bakel for over 20 years and possesses thorough knowledge of the company and its clients. The second operation manager (Heesch branch) who was appointed in 2022, previously working as a project manager for many years, has gradually assumed responsibilities from the current director Anthony, allowing him to reduce his day-to-day operational involvement. In addition, an employee was hired by Van Bakel, who previously managed the administration personally for 18 years from an accounting office. She is now formally employed as a controller under contract by Van Bakel to take over certain responsibilities from directors Anthony and his partner Manon, ensuring that the company can operate independently of them, and may potentially be added to the MT.

2. Company information

CONFIDENTIAL

2.11 Personnel

- As of September 2025, the company employs 32 staff members, excluding three children and one stepchild of the owners. These staff members represent 27 FTEs (2023: 26 FTE, 2024: 30 FTE). The distribution per entity is presented in the figure to the right. The workforce primarily consists of younger employees, with the majority being no older than 40 years. Furthermore, the company retains a number of experienced employees who have served the company for many years.
- As of September 2025, the three children and one stepchild of the owners are on the payroll (1.04 FTE). Three of them hold staff positions, while the project-based general employee alone accounts for 1 FTE. The three children will exit the company after transaction, the stepchild will continue.
- Two operations managers and two project managers receive additional compensation. These bonuses are primarily based on achieving a certain EBT percentage. The bonuses range from 25% of one month's salary up to a maximum of three months' salary. One of the two operations managers receives a bonus equal to 15% of the EBT of Van Bakel Elektro Roosendaal B.V. Furthermore, the company operates under the Collective Labour Agreement for the metal and engineering sector ("CAO Metaal en Techniek").
- Given the low absenteeism since 2024, the company has opted for own-risk coverage from 2024 onward, reserving funds internally instead of through an insurer.
- Van Bakel places significant emphasis on human resources and employee training, with the aim of retaining staff.

- In the payroll overviews, there are two contractors, each accounting for 1 FTE. Their activities are limited to assembly work. In addition, during peak periods, self-employed contractors are engaged, averaging the equivalent of 3 FTEs. Their activities include work preparation, design work, and assembly.

3. Market information	23
4. SWOT	27
5. Financial information	29

3. Market information

CONFIDENTIAL

3.1 Introduction

Van Bakel is an electrical installation company. Therefore, the company operates within the construction industry sector, specifically in the sector of electrotechnical building installations. As such, the company is dependent on developments within this sector.

3.2 The industry in the Netherlands

The Dutch subsector of electrical building installations comprises over 20,000 companies in 2025. The revenue development of the building sector for the years 2019–2024 is displayed on the right. In 2021 and 2022, the sector experienced significant revenue growth, primarily driven by the recovery of the Dutch economy. In 2023, revenue growth slowed, partly due to rising mortgage interest rates and increasing material costs. In 2024, growth picked up again, largely attributable to the stabilization of construction material prices.

3.3 Recent main developments

■ Sustainability

The sustainability transition plays a central role in the installation sector. Buildings account for approximately 12% of total CO₂ emissions in the Netherlands. The government aims to halve national CO₂ emissions by 2030 and reduce them by 95% by 2050. This requires a significant acceleration of the energy transition in the built environment. Concepts such as circular construction, urban mining, and the use of bio-based and modular materials are becoming more widespread, particularly in newly built projects.

Revenue development construction & GDP development

■ Technology

Technological development is reshaping the sector, particularly through digitalization and automation. Increasingly, installation work is carried out in controlled environments, such as production facilities or factories, allowing for higher efficiency and quality control. Standardization and industrialization are key drivers for improving productivity.

3. Market information

CONFIDENTIAL

■ Labour shortage

The installation sector faces a persistent labor shortage, which significantly influences capacity and delivery times. Currently, 50% of companies report staff shortages, and 33% have to refuse assignments due to lack of personnel. The estimated shortfall for 2025 is around 30,000 vacancies. There's an increasing demand for workers with technical, digital, and data-related skills. Investing in employee retention is therefore crucial to ensure the continuity of businesses.

3.4 Forecasts

The outlook for the (electrical) installation sector remains positive despite current challenges. Demand for sustainable solutions in buildings is expected to grow steadily, driven by climate targets aiming for energy-neutral buildings by 2050. This ensures stable growth opportunities.

Population growth in the Netherlands—from 18 million today to over 21 million by 2050—will increase housing demand, especially for flexible and small-scale care homes, boosting the need for technical installations.

Labour shortages persist, pressuring capacity but encouraging investments in automation, digital skills, and attracting technical talent.

3. Market information

CONFIDENTIAL

3.5. The future potential of Van Bakel

Growth in sustainable energy solutions

Van Bakel has promising opportunities in sustainable energy, especially in energy storage with EMS and charging infrastructure.

Internal strengthening and leadership

With a strong internal structure, Van Bakel is well-positioned for sustainable growth.

Smart-building solutions

Increasing demand for integrated smart-building solutions opens new commercial avenues for Van Bakel.

Expanding solar energy market

Despite a recent downturn, there is potential for recovery and growth in solar energy solutions, particularly for housing associations.

Further digitalization

Van Bakel can capitalize on advancements in digitalization and automation to streamline installation processes and improve operational efficiency.

Gross profit	4.482.392	4.325.363	1.713.892
<i>Gross margin %</i>	<i>46%</i>	<i>58%</i>	<i>64%</i>
Wages and salaries	1.202.014	1.307.262	657.844
Social charges	305.912	326.638	178.644
Other employee expenses	176.760	91.147	27.752
Housing expenses	171.040	208.663	148.067
Operating expenses	9.597	5.713	188
Office expenses	123.176	101.488	74.336
Car expenses	149.556	139.805	72.140
Sales expenses	128.509	120.456	-561.640
General expenses	169.901	124.390	38.600
Reported EBITDA	2.045.927	1.899.801	1.077.961
<i>Reported EBITDA margin %</i>	<i>21,1%</i>	<i>25,4%</i>	<i>40,4%</i>

Notes to the P&L account:

- The 2025YTD figures are up to and including June. Van Bakel indicates that the second half of 2025 is expected to outperform the first half, partly driven by the rescheduling of postponed projects.
- The decrease in revenue in 2024 is mainly attributable to policy decisions by the Dutch government concerning solar systems. As a result, these became less attractive to customers, leading to reduced sales. Van Bakel is increasing its focus on growth markets such as charging stations and storage systems (batteries) with an EMS (Energy Management System).
- There is intercompany hiring of personnel between the companies. These costs have been eliminated.
- The increase in wages and salaries in 2024 is mainly driven by the rise in the number of FTEs from 26 in 2023 to 30 in 2024.
- The sales expenses YTD2025 consist of provision for bad debts (€ 342K) and provision for guarantee (€ 243K).

5.2 Normalized P&L account Van Bakel

P&L (x € 1) Van Bakel	2023	2024	2025YTD
Revenue	9.688.184	7.480.198	2.671.167
Raw materials and consumables used	4.157.454	2.110.451	818.410
Subcontracted work and other external expenses	1.048.338	1.044.384	138.865
Gross profit	4.482.392	4.325.363	1.713.892
Gross margin %	46%	58%	64%
Wages and salaries	1.202.014	1.307.262	657.844
Social charges	305.912	326.638	178.644
Other employee expenses	176.760	91.147	27.752
Housing expenses	171.040	208.663	148.067
Operating expenses	9.597	5.713	188
Office expenses	123.176	101.488	74.336
Car expenses	149.556	139.805	72.140
Sales expenses	128.509	120.456	-561.640
General expenses	169.901	124.390	38.600
Reported EBITDA	2.045.927	1.899.801	1.077.961
Reported EBITDA margin %	21,1%	25,4%	40,4%
Normalizations			
1. Salary M. Geurts	49.503	49.503	24.752
2. Salary three children A. van Bakel	4.977	4.977	2.489
3. Cost advantage on material costs	70.000	70.000	35.000
4. Rent cut-off 2025	-	-	17.673
4. Market-based rent	30.092	53.353	45.808
5. Provision for doubtful debtors VBE	-	342.963	-342.963
5. Provision for doubtful debtors Eco	79.953	-79.953	-
5. Provision for doubtful debtors Services	-61.013	-178.600	-
6. Provision for warranty	-	-	-242.556
7. Private expenses of Karli	66.417	38.929	11.373
7. Private expenses DGA	199.579	93.986	25.869
8. Sponsorship	22.910	22.910	11.455
Normalized EBITDA	2.508.345	2.317.869	666.860
Normalized EBITDA margin %	25,9%	31,0%	25,0%

Normalizations:

1. The salary of M. Geurts, which is charged to Van Bakel through Karli B.V., has been normalized, as she will leave the company following the acquisition. Since someone has already been hired to partially take over her responsibilities, no additional recruitment is required. If A. van Bakel were to leave the company after the acquisition, his salary costs (€ 84K per year) would remain the same for his replacement.
2. The salaries of A. van Bakel's three children have been normalized, as their roles were largely inactive and they will leave the company following the acquisition.
3. There is an estimated annual purchasing benefit of around € 70K on material costs.
4. For YTD 2025, seven months of rent expenses were recorded in two entities (Van Bakel Eco (€ 5K) and Karli (€ 13K), therefore, it has been normalized to six months of rent. The current rent for Cereslaan in Heesch is € 209K. However, the valuation report as of 08-2025, states a market rental value of € 115K. Therefore, these costs have been normalized including an annual indexation rate has been taken into account in 2024 and 2025 (2,70% and 4,10%, respectively).
5. The provision for doubtful debtors for three entities is normalized as there had been a provision recorded but have since been collected.
6. The provision for warranty was released in 2025 as it had not been used. This one-off income is normalized.
7. There are private expenses for the director in private (housing expenses) and Karli B.V. (general expenses). These costs are normalized.
8. The sponsorship expenses relate to advertisements in local newspapers, billboards, and sponsorships at the football and tennis clubs. Since these costs are discretionary, they are normalized.

5.4 Latest Estimate P&L account Van Bakel

P&L (x € 1)	
Van Bakel	2025 LE
Revenue	7.400.000
Raw materials and consumables used	2.300.000
Subcontracted work and other external expenses	600.000
Gross profit	4.500.000
<i>Gross margin %</i>	<i>61%</i>
Wages and salaries	1.335.000
Social charges	345.000
Other employee expenses	93.000
Housing expenses	170.000
Operating expenses	6.000
Office expenses	104.000
Car expenses	140.000
Sales expenses	20.000
General expenses	100.000
Reported EBITDA	2.187.000
<i>Reported EBITDA margin %</i>	<i>29,6%</i>

Notes to the Latest Estimate P&L account:

- The latest estimate is based on management's expectations and the order pipeline. The normalizations as displayed in the YTD2025 figures are taken into account.
- Van Bakel expects the current trend to continue in the coming years. Therefore, the forecasted revenue and gross profit margin for 2025 are in line with 2024.
- In the 2025 forecast, the wages and salaries and social charges are based on the wage increases stipulated in the Collective Labour Agreement for the metal and engineering sector ("CAO Metaal en Techniek"). This CLA states an 3% pay rise in March and 3% in October.
- Other employee expenses and other operating expenses have been increased in line with an inflation rate of 2,5% and the normalizations have been taken into account.

Introduction

This information memorandum ("IM") contains confidential information regarding the potential sale of Van Bakel ("Company"). Crowe Foederer Corporate Finance B.V. ("Crowe") is the financial advisor on behalf of Karli B.V. ("Seller") with respect to the potential takeover of the Company ("Proposed Transaction"). Crowe has been granted authorization to issue this IM, on behalf of the Seller, exclusively to the party to whom it is addressed ("Recipient"). Interested parties will have to form their own opinion independently regarding the Proposed Transaction. Any potential acquirer should seek their own independent advice to make an individual assessment of the Proposed Transaction.

Accountability, warranties, and liability

This IM has been composed and distributed among Recipients in order to assist them in their judgment of the Proposed Transaction. The IM concerns only information which is provided here by the management of the Seller. Crowe does not guarantee the accuracy and completeness of the provided information and the information given in this report. Crowe consequently does not accept any liability for possible errors or deficiencies in this report.

This IM is not written to provide any investment advice, nor does it purport to contain all information that might be required to evaluate the Proposed Transaction. The Recipient should not (solely) rely on the statements in this IM. The information in this IM has been derived from records maintained by the Seller and has not been verified or audited by the Seller, the Company, Crowe, or anyone else. All estimates, projections or forecasts involve significant elements of subjective judgement that may or may not be correct. Any responsibility or liability of the Seller, the Company and Crowe for the use of this IM by a Recipient is hereby expressly disclaimed. Recipients cannot derive any rights from the availability of this IM. This information memorandum is therefore not legally binding under any circumstance.

Confidentiality

This IM is made available exclusively to Recipients that have signed and returned a non-disclosure agreement. This IM and all of its contents are strictly confidential and subject to the terms of the non-disclosure agreement signed by the Recipient. The information remains the property of the Company and may not be copied, released or distributed to any third party.

The non-disclosure agreement signed by the Recipient applies strictly to all information reported in this IM and all subsequent additional information that is provided in connection to the Proposed Transaction. When the conversations and/or negotiations do not lead to an acquisition in the Company, the Recipient will destroy the obtained information about the Company and the Proposed Transaction without any delay or at the first request of Crowe without holding back a copy in any form. The aforementioned non-disclosure agreement will still apply in that case.

Restrictions

This IM and its contents shall not form a basis of any contract or commitment with the Seller, the Company or Crowe. Crowe, the Company and the Seller reserve the right in absolute discretion, at any time without notice, to change the procedures, to negotiate with other parties, to enter into agreements with other parties, without becoming liable in any way. Crowe, the Company and the Seller are not liable for any costs or expenses incurred by the Recipient with regard to the Proposed Transaction. It is not allowed to make the information from this IM part of any agreement between different parties regarding the Proposed Transaction, nor shall be referred to this in any agreement.
